

# Protect Your Child From Yuck Mouth

Brushing alone isn't enough to keep your child's mouth clean and healthy. Good dental health involves brushing and flossing along with regular visits to your dentist. Dental visits aren't just for taking care of cavities. Annual dental visits are very important in the good growth and development of your child's teeth.

During your child's dental visit, the dentist can check teeth, gums, and other oral tissues. This helps find any problems that may be arising in your child's mouth. Cavities may not have symptoms until after damage has been done to the tooth. This is why regular visits to your dentist are so important in keeping your child's teeth healthy and clean. Early signs for tooth decay are easier to treat than advanced cases.

Dental health is  
very important  
at any age.

Call today to  
schedule your  
child's annual  
dental visit.

*Medicaid services are funded in part under contract with the State of New Mexico.*
